

Textbooks

Allowed

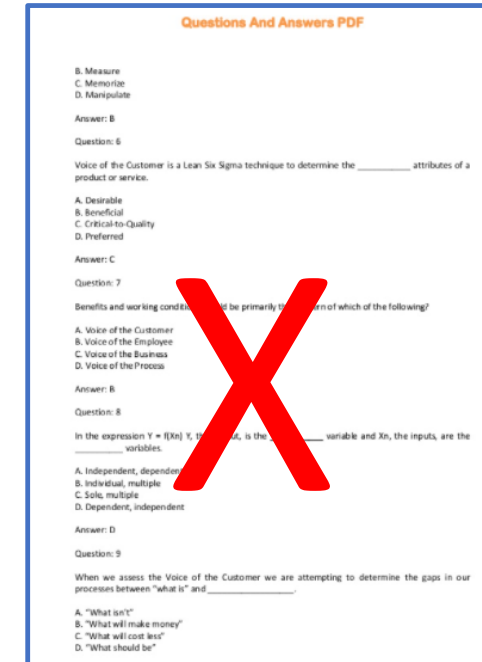

Any Textbooks, BUT
they **must NOT HAVE**

- Blank pages
- Questions and answers
- Weekly refresher quizzes

Blank pages, refresher quizzes and questions-and-answers MUST be removed

Not Allowed

- Blank pages
- Questions and answers
- Weekly refresher quizzes

Post-Its

Allowed

As bookmarks only: no writing

Not Allowed

Post-Its with writing

Personal Notes (page 1 of 3)

Allowed

Notes bound with **cover** (ring binders, spiral binders, plastic snap binders, brads, screw posts)

Not Allowed

- Manually or hand stapled documents that are not securely fastened in their covers are not allowed."

Personal Notes (page 2 of 3)

Not Allowed

- blank writing tablets or tablets containing blank pages
- unbound tablets

Not Allowed

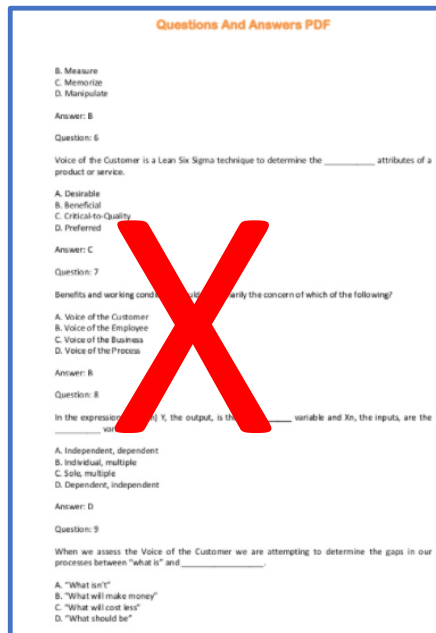

- unbound notes, slide charts and/or wheel charts (hand-held cardboard or plastic calculating devices with rotating or sliding pieces)

Personal Notes (page 3 of 3)

Not Allowed

- collections of questions and answers or weekly refresher-course quizzes

Not Allowed

- unbound notes, slide charts and/or wheel charts (hand-held cardboard or plastic calculating devices with rotating or sliding pieces)

Calculators (page 1 of 5)

Allowed

Non-programmable basic or scientific calculators

Stand-alone non-programmable, non-graphing calculators look like the calculators below

There are hundreds of calculators in this category but some common examples include: CASIO FX-260, Sharp EL-501, and TI-30X.

This is what a non-programmable calculator looks like.

Calculators (page 2 of 5)

Not Allowed

Programmable basic, scientific or graphing calculators

Stand-alone, programmable, graphing calculators often look like the calculator shown on the left. Some examples are: Casio 975 0/9850/9860, HP 40/50/PRIME, and TI 83/84/89/NSPIRE/VOYAGE.

Programmable non-graphing calculators look like the right.

To identify these calculators, look for the presence of the 'EXE' button, the 'Prog' button, or a 'file' button. Examples include but are not limited to: Casio Super FXs, numerous older Casio models, and HP 35S. A calculator of this type with the buttons labeled is shown to the right.

Features of Programmable calculator:

1. These calculators are capable of storing text or alphanumeric data input by a user.
2. These calculators are capable of storing, manipulating or graphing functions entered in symbolic form.
3. These programmable calculators are capable of performing for operations such as differentiation, definite integration, algebraic expressions, binomial expansion, symbolic differentiation and the solution to system of equations.
4. These calculators are capable of external communication or Internet connectivity.
5. These calculators display a *matrix* and vector function key
6. These calculators allow use of the full alphabet from A-Z
7. These calculators tend to be bulky and heavy in comparison to non programmable calculators

Calculators (page 4 of 5)

Not Allowed

This is what a programmable calculator looks like.

Programmable Calculators

These calculator runs on a Computer Algebra System (CAS). A CAS helps to make certain difficult algebraic functions automatic and less tedious. As you can see, these calculators also have graphing capabilities. A calculator with graphing capabilities is most likely to be programmable. The easiest way to tell if the calculator has graphing capabilities is by looking at the larger screen than would be found on a scientific calculator.

The main difference between a programmable and non-programmable calculator is there are no function buttons on the non-programmable calculator. Another difference that can be noticed on non-programmable calculators there are no *matrix* or *vector* functions on display.
